

FENESTRA TI

GLOBAL INTELLIGENCE. **CONNECTED INSIGHT.**

PANOPTIC — FOR ORGANISATIONS

THREAT INTELLIGENCE BUILT AROUND YOUR BUSINESS

For businesses of any size that can't afford to be surprised.

THREAT INTELLIGENCE HAS A SIGNAL PROBLEM

Most organisations aren't short of feeds — they're short of relevance. Generic OSINT dashboards surface thousands of alerts a week and leave security teams to work out which three actually matter.

Meanwhile the risks that do the damage rarely announce themselves in a single feed — a breached credential, a dark web mention, a hostile actor's shifting focus, and a principal's travel itinerary can each look unremarkable in isolation, and only make sense together.

Alert fatigue. Volume without prioritisation just moves the problem downstream.

Disconnected signals. Cyber, physical, and geopolitical risk are tracked in separate tools that never talk to each other.

Stale context. A pre-trip briefing or a quarterly risk report is out of date the moment circumstances change.

Fenestra was built to close that gap — fusing real-time collection with human analysis, so what reaches you isn't noise. It's a picture you can act on.

ORGANISATIONAL EXPOSURE

SEE YOUR ORGANISATION THE WAY AN ADVERSARY DOES

Panoptic continuously monitors the exposure signals that matter to a business and rolls them into one clear risk picture — not a wall of disconnected alerts.

Breached credentials & leaked data — tied to your domains and infrastructure.

Dark web chatter — naming your organisation or supply chain.

Exposed infrastructure — and vulnerable assets attackers can reach today.

Locations & sites — crime, unrest and security events around your premises.

Results & assessment — findings by category, with a regular written assessment of what they mean for the organisation.

Each signal is scored and rolled into a single risk picture — so security leadership can see what to prioritise.

Screens from the live Panoptic platform, using a demonstration profile for a fictional organisation. Threat-actor, vulnerability and event data shown is real.

YOUR TECHNOLOGY VS. ACTIVE EXPLOITATION

WHO CAN REACH YOU — AND THROUGH WHAT

Every product you run is matched against the vulnerabilities threat actors are exploiting right now, so the risk picture starts from your own technology, not a generic feed.

- 1 Threat actors relevant to your sector, countries and technology.
- 2 The vulnerabilities they exploit, with how precisely each applies to your version.
- 3 Your software (or a supplier's) that those vulnerabilities affect.

Exposure score — one score across every category, so you can track whether exposure is rising or falling.

THREAT ACTOR ANALYSIS

KNOW WHO'S ACTUALLY RELEVANT TO YOU

State-aligned groups, cybercriminal operations and hacktivist collectives — profiled from Fenestra's own collection and ranked by relevance to your sector, locations and technology.

THREAT ACTORS MOST RELEVANT TO THIS ORGANISATION

Locations: GB, NL · Sector: Transportation

ACTOR

DragonForce
Ransomware Group

WHY IT IS RELEVANT

Exploits flaws in Connect Secure (your tracked software)
Exploits flaws in Exchange Server (your tracked software)
Exploits flaws in FortiOS (your tracked software)
Exploits flaws in NetScaler (your tracked software)
Exploits flaws in SharePoint (your tracked software)
Posted 3 victims in GB/NL in the last 90 days
Operates in GB

Relevance to you — the products an actor exploits and its recent victims in your countries.

Ransomware tracking — victims, active groups and countries hit, updated daily.

Threat actor analysis scoped to what's actually relevant — your sector, your region, your adversaries — not a generic catalogue.

HOW YOU WORK WITH US

TWO WAYS TO WORK WITH FENESTRA

Same platform, same collection. You choose who drives it.

SELF-MANAGED

Your team runs Panoptic directly.

- Live dashboards and alerts across everything you monitor.
- Weekly AI-generated summaries and on-demand PDF reports.
- You decide what's monitored — organisations, sites, suppliers and technology.

BEST FOR

Organisations with in-house security staff who want direct control.

ANALYST-MANAGED

Fenestra analysts run it on your behalf.

- Our analysts set up and tune your monitoring.
- Findings reviewed by an analyst before they reach you.
- Written assessments and briefings, with escalation when something needs action.

BEST FOR

Businesses without a dedicated intelligence team.

Either way, you get the same collection, the same platform and the same intelligence behind it.

WHY FENESTRA

BUILT ON REAL COLLECTION, NOT REPACKAGED FEEDS

Fenestra runs its own multi-source collection infrastructure — spanning global news, geopolitical event data, dark web, breach data, and cyber threat reporting.

Genuine breadth of collection — not a single-vendor feed reseller.

Analysts behind the intelligence — every actor profile and assessment shaped by analysts, and on your account if you want them.

Fused, not siloed — cyber, physical, and geopolitical signal in one picture.

283

threat-actor profiles
maintained

1,150+

ransomware victims
tracked in the last 30
days

1,750+

known-exploited
vulnerabilities mapped

80,000+

attack sessions a week
on our own sensors

Figures from Fenestra's own collection, October 2026.

Genuine breadth of collection, backed by analyst expertise — whether your team runs the platform or ours does — is what makes Fenestra intelligence something you can act on.
